Open Position for Scientific Informatics at Abbott R&D Center, Shanghai October 2011

Company: Abbott has established an R&D center in Shanghai to discover novel therapeutics for cancer, immunological diseases, pain, neurological disorders and kidney diseases. We are looking for an experienced scientific informatics manager to support global R&D sites as well as R&D Center in Shanghai.

Position: Informatics Manager

Function:

As a seasoned scientific informatic lead pioneering in the R&D lab in Shanghai, the candidate has three major roles: 1) responsible for establishing and directing the current offshore IT team (6-7 FTE) for the headquarter as well as the local lab; 2) Lead software support collaborations between Abbott and external collaborators (CRO) in Asia, such as user training and support; 3) As the Discovery R&D lab rapidly expands in Shanghai in the next 2-3 years, the candidate will lead the effort to build a local IT team to meet the R&D lab needs.

Responsibilities:

- Manage and direct offshore IT contractor activities in Shanghai for the global core team.
- Lead and initiate new IT projects and execution using offshore resource.
- Strategic planning and future team building due to the R&D expansion.
- Establish and maintain the positive working relations internally and externally.
- Provide scientific software and IT technical guide to the offshore teams.
- Support research software and conduct training to offshore teams as well as to external collaborators.
- Project management to ensure project timelines and quality are met.
- Provide IT and application support to the local research lab and regional operations.
- Report to the department manager in the U.S.
- May perform other duties as assigned.

Requirements:

- Prefer Ph.D. in life science with 2+ or MS with 4+ years of working experience in healthcare industry, or a computer science degree along with strong educational academic background in biology or chemistry with some practical experience in scientific informatics.
- IT project management experience with track record of on-time deliveries.
- Leadership in business and experience in scientific informatics technologies.
- Solid understanding on software development life cycle, SDLC.
- Goal orientated, analytical, organizationally mature and independent problem solving capability.

ABBOTT R&D CENTER, SHANGHAI
